

# ETERNAL TRUSTS IS A BLOCKCHAIN PLATFORM THAT GUARANTEES AUTONOMOUS PURCHASING OF FUTURE LIFE EXTENSION TECHNOLOGIES

According to opinion polls, at least 15% of population would like to prolong their lifespan. Unfortunately, legitimate science-based methods that can radically extend life are inaccessible -- many

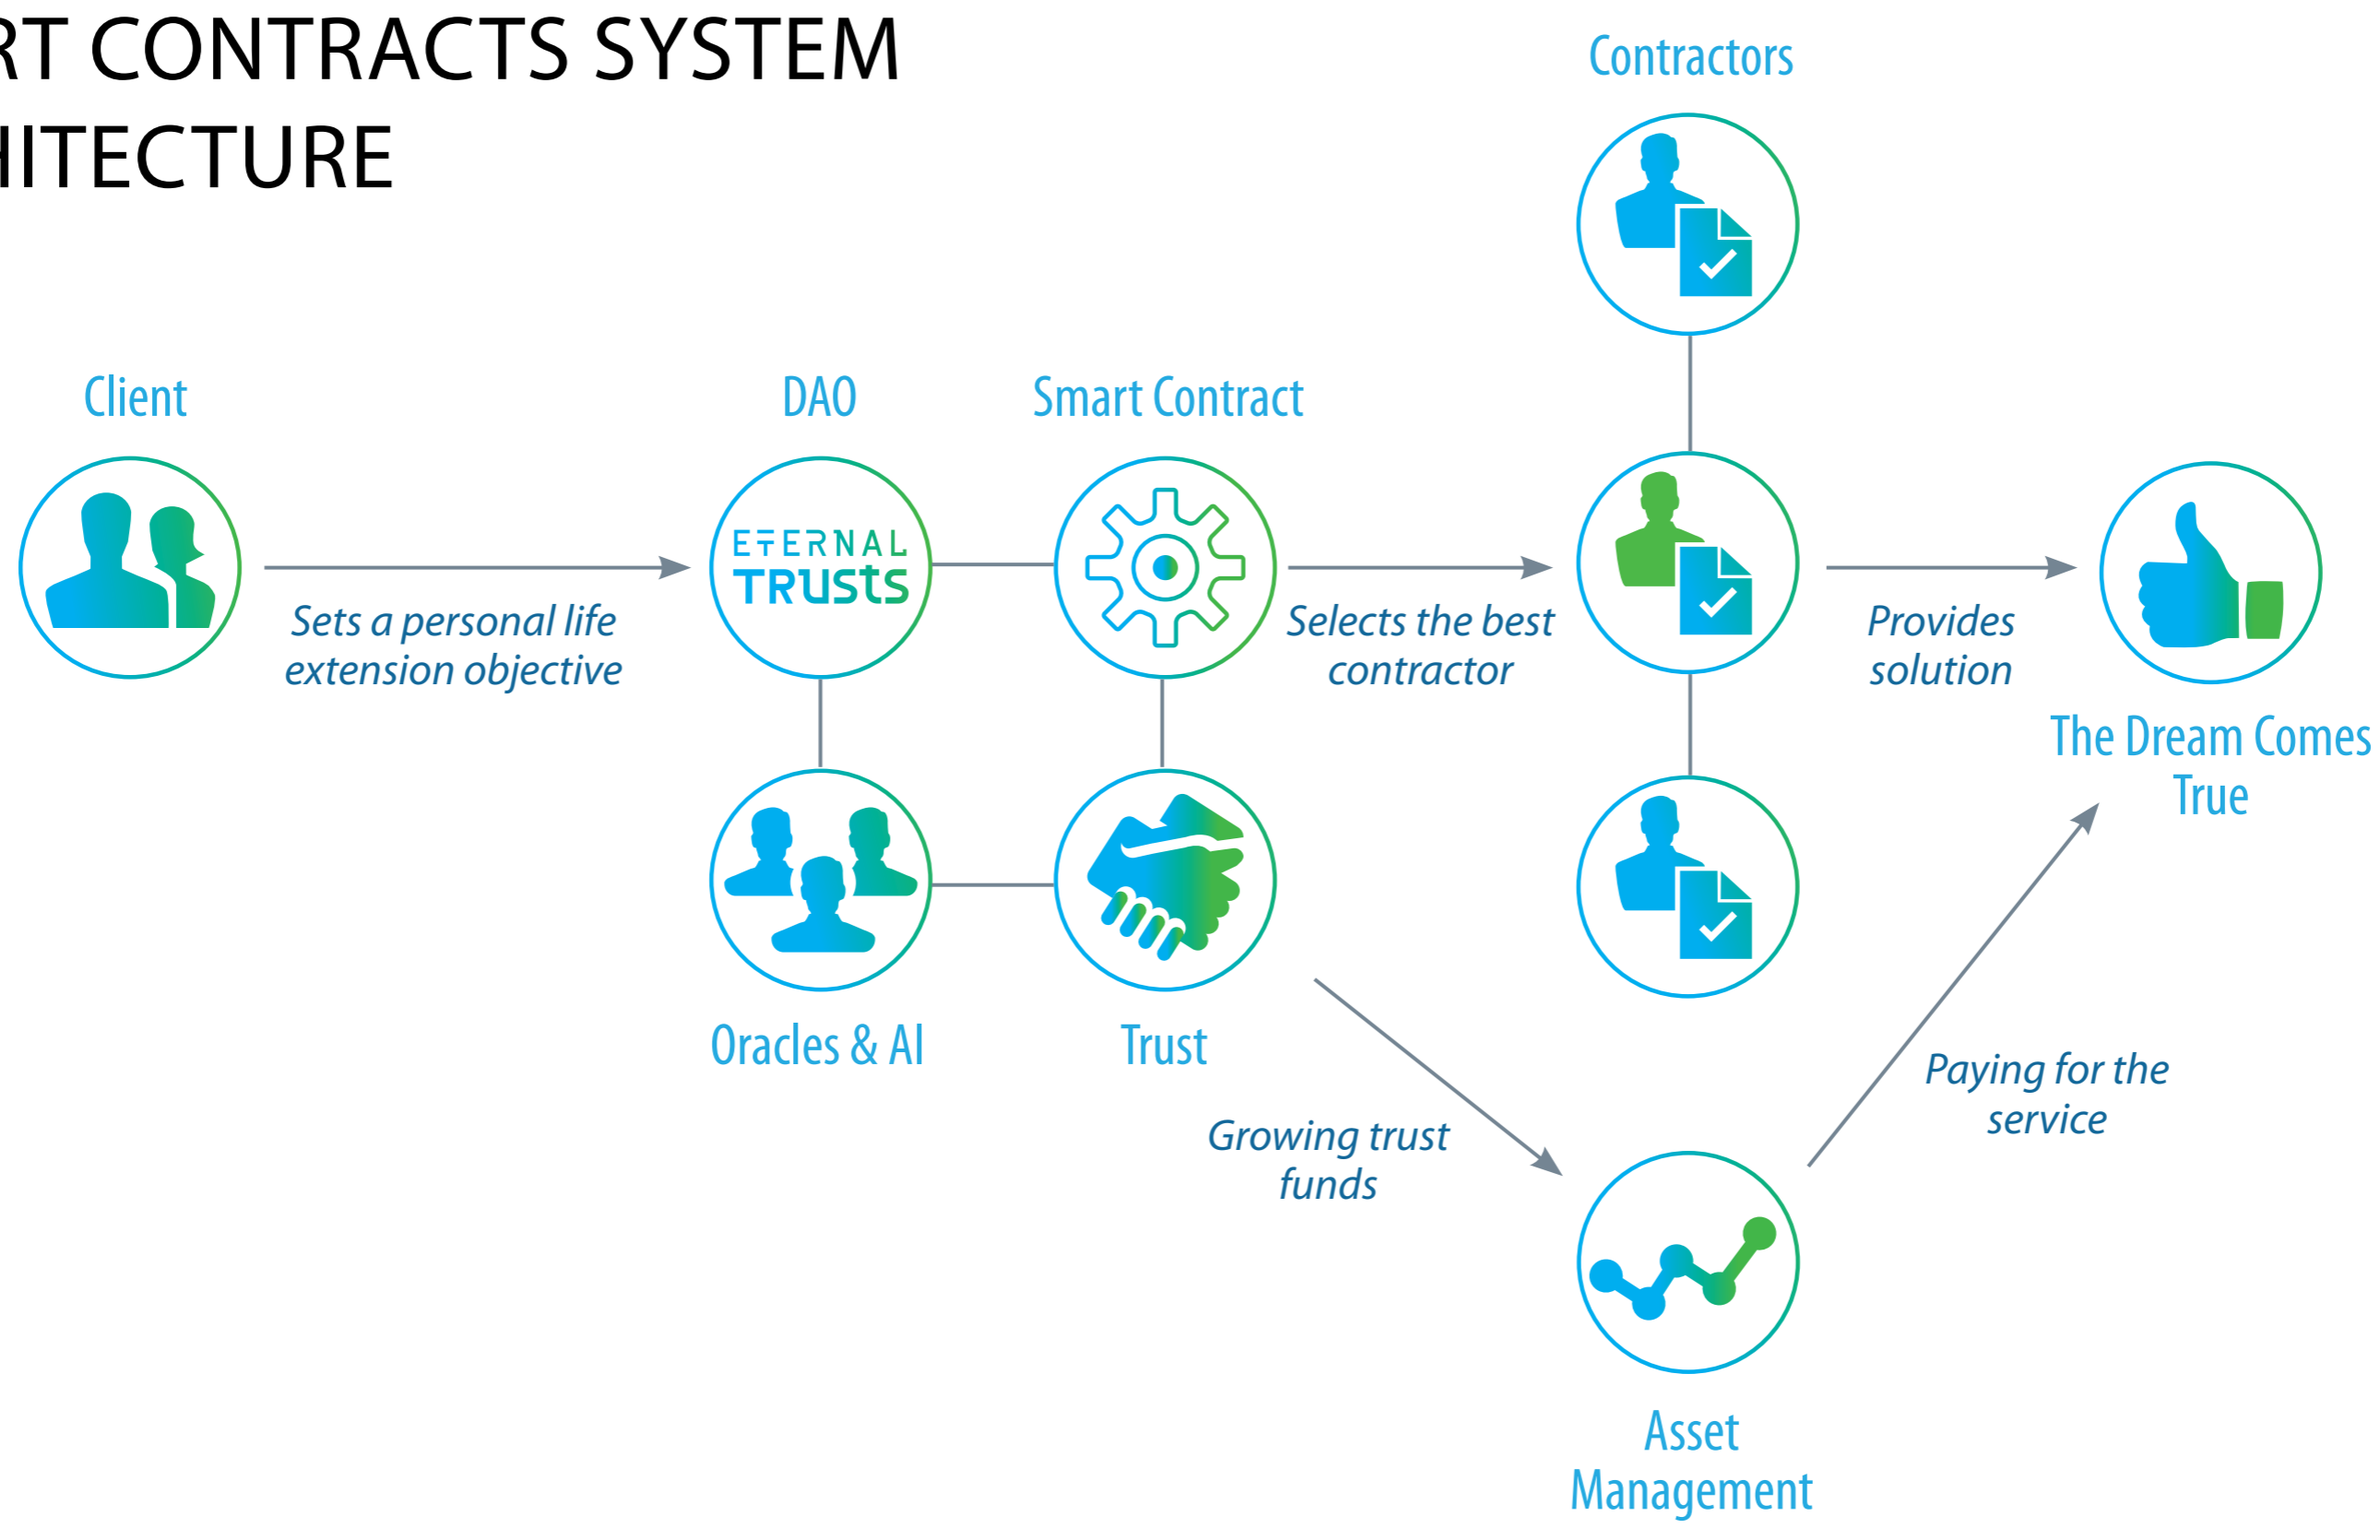

crucial technologies have not yet been approved by regulations, are unavailable due to ethical issues, or require additional research.

EternalTrusts is a platform that enables autonomous purchasing of vital biomedical technologies that are yet to emerge. Through smart contracts, AI, and reliable legal structures called discretionary purpose trusts, we guarantee that whenever a technology required by our clients appears on the market, all necessary transactions will be made automatically.

As we manage the assets of our clients in the purpose trusts, we also seek to grow their value, which ensures that there is enough funds when it is due to make the purchase..

## SMART CONTRACTS SYSTEM ARCHITECTURE

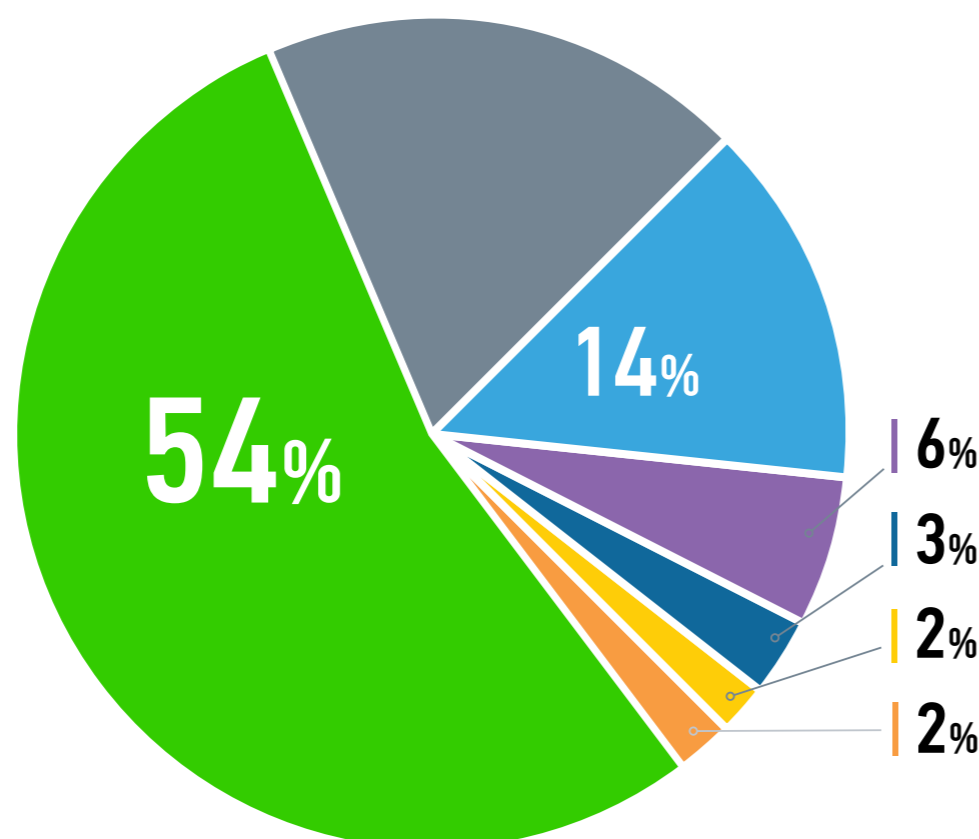

## TOKEN SALE
